Introduction

Salesforce Clone Website

Scope of the document:-

Creating a Salesforce clone website using just HTML and CSS is a significant challenge, mainly because Salesforce is a highly complex CRM platform with extensive backend functionality for data management, user authentication, security, and more. HTML and CSS are primarily used for front-end design and structure, and they cannot replicate the backend functionality required for a CRM system like Salesforce. Building a fully functional clone would necessitate in-depth knowledge of server-side programming languages, databases, user authentication systems, and integration capabilities. While you can design a front-end user interface that resembles Salesforce for learning purposes, replicating its full functionality would require a much broader scope and a team of developers skilled in various technologies.

ROOT STRUCTURE:-

- Salesforce
  - Code
    - HTML
      - → Salesforce_res.html
      - → Salesp.html
      - → Indcom.html
      - → Learning.html
      - → Customers.html
      - → Support.html
      - → Contact.html
      - → Search.html
      - → Start.html
      - → Overview.html
      - → Small.html
      - → Sales.html
      - → Service.html
      - → Market.html
    - CSS
      - → Salesforce_res.css
      - → Salesp.css
      - → Indcom.css
      - → Learning.css
      - → Customers.css
      - → Support.css
    - IMAGES

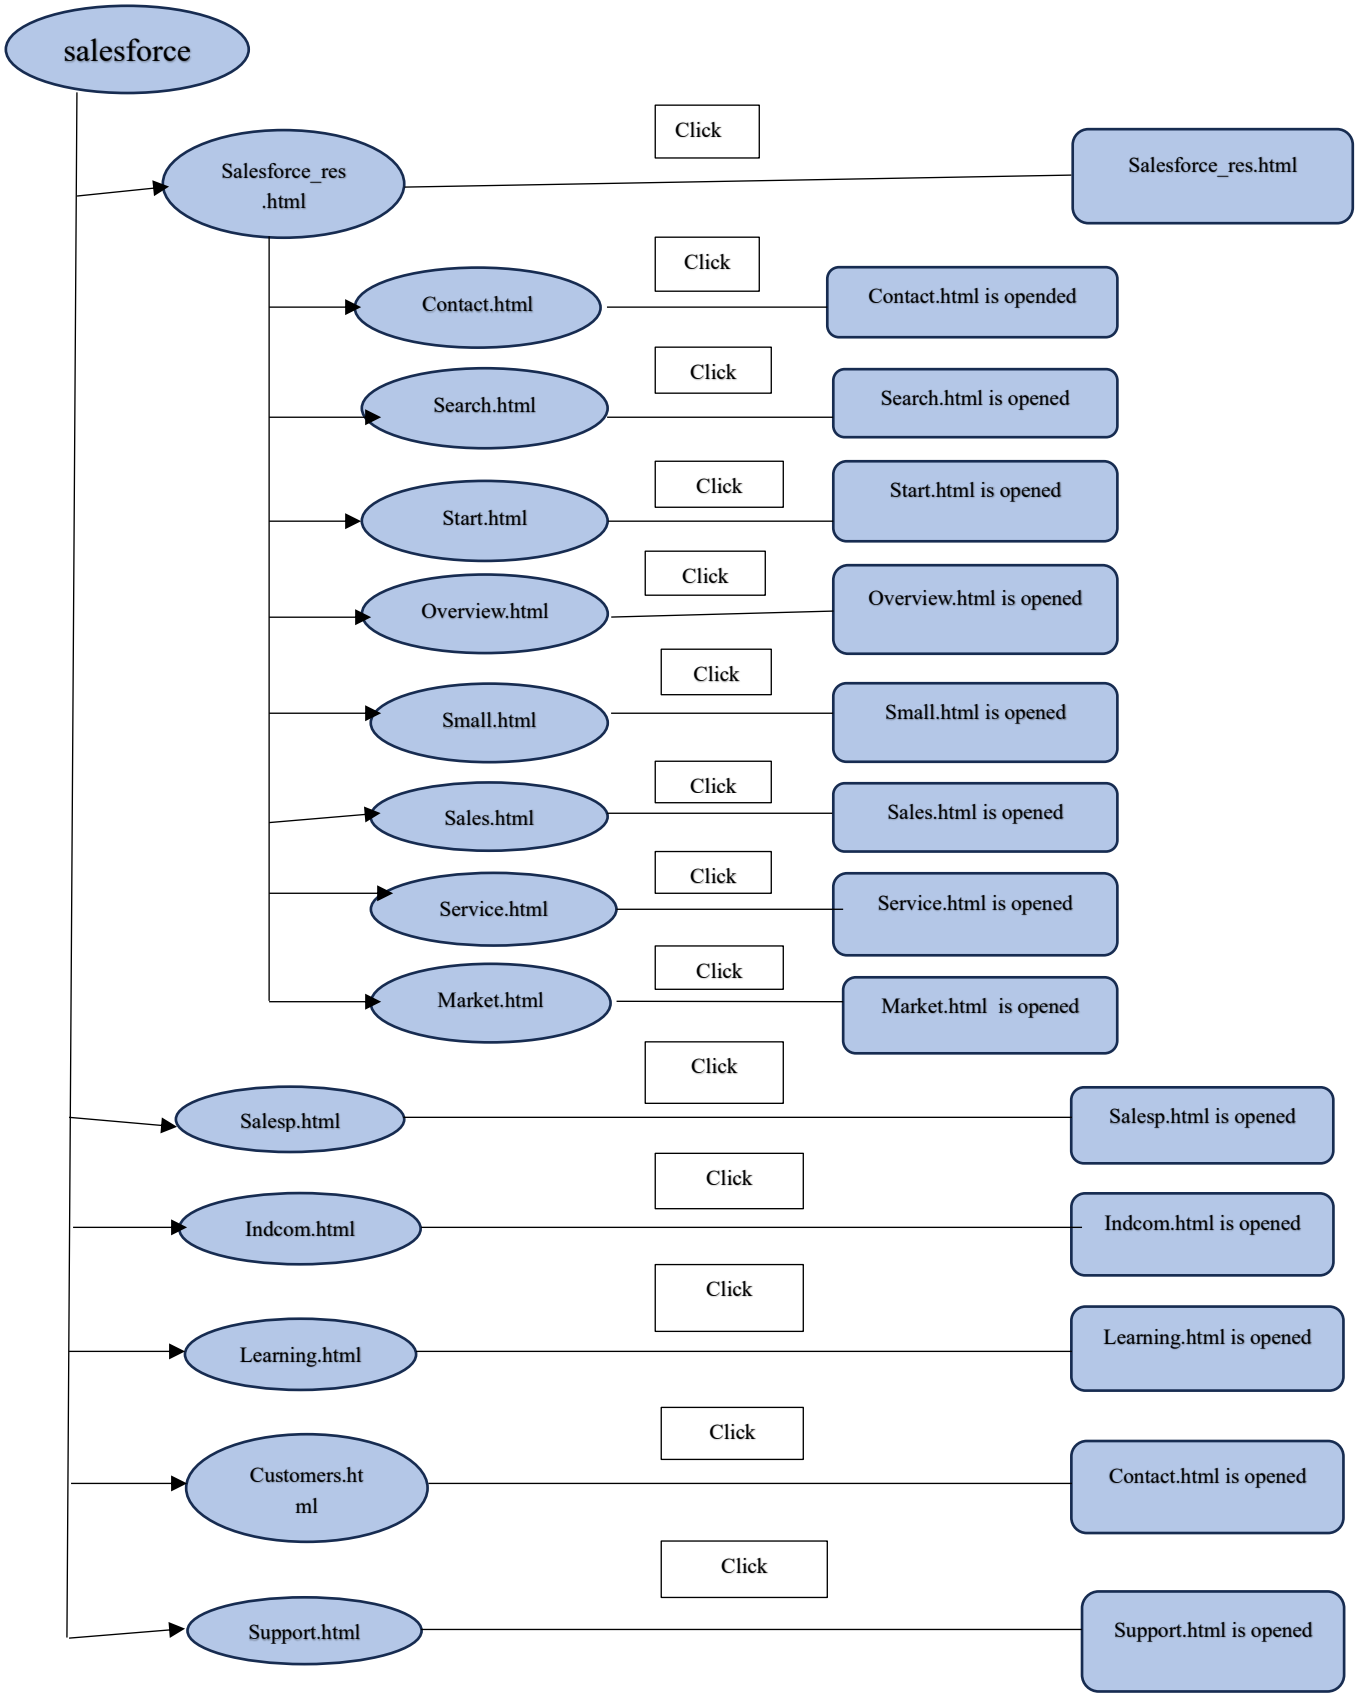
Control Flow Diagram:-



HISTORY OF HTML:

HTML stands for Hyper Text Markup Language.

- It is used to share the information over the internet.
- HTML id developed by Tim Berner's Lee in 1991.But officially in 1993.
- The First version of HTML consists of "18 tags".
- HTML follows certain rules and regulations setup by "**ISO**".
- International Organization for standardization is set of rules and regulation are present in '**SGML**' document.

Versions of HTML

- **HTML-1** version in the year 1993.
- **Html-2** version in the year 1995.
- **HTML-3.02** version in the year 1997.
- **HTML-4.1** version in the year 1999.
- **HTML-5** version in the year 2014.

Features of HTML

- It is easy to Learn.
- It is a tag-based language.
- HTML is supported by multiple browsers.
- First web browser is Netscape navigation which was developed by the "Mosaic".
- It is a portable language.
- **WORA** stands for 'write once run anywhere'

Limitations of HTML

- HTML has fewer designing capabilities
- It is dependent on other technology such as CSS in order to develop well designed webpages.
- HTML has no programming capabilities.
- Using HTML and CSS we can develop only static Web page.
- In order to write the HTML code required an editor such as VS Code, Notepad, Eclipse.
- In order to execute the HTML code, we required Web browsers like Chrome, Firefox, edge, Opera Safari.

CSS

- **CSS** stands for "Cascading Style Sheets".
- It was developed by W3C to add stylings to the HTML elements.
- W3C stands for World Wide Web.com

Versions of CSS:

- **CSS-1** (Level-1) in the year 1996.
- **CSS-2** (Level-2) in the year 1998.
- **CSS-3** (Level-3) in the year 1999.

Why do we require CSS ?

- Since HTML has fewer designing capabilities we cannot create well designed or most appealing Websites.
- Using HTML we cannot add style, animation and transitions to the Webpage.
- Therefore, we require CSS to create well designed Webpage

Advantages of CSS

- It allows to add styles, animation and various effects to the Webpage.
- It allows us to develop the Webpage rapidly. It is also known as RAD (rapid application Developer).
- It allows us to separate from formatting develop page to the presentation of Webpage.
- It allows to create well designed Websites.

Limitations of CSS

- Using CSS, we can perform static styles for the Webpages.
- In order to create dynamic styling for the Websites. We must make use of scripting language such as JavaScript and Libraries of JavaScript.

Types of CSS:

1. Inline CSS
2. Internal CSS
3. External CSS
4. Default Browser CSS

Inline CSS:

Defining all the CSS properties within the style attribute inside the opening of the tag is referred to as Inline CSS.

Internal CSS:

Defining all the CSS properties within <style> inside the HTML document is referred to as Internal CSS.

External CSS:

Defining all the CSS properties within as external Script or File with an extension CSS is referred to as External CSS.

- In order to link external CSS file within the HTML document we must use of <link>.
- The value for the ‘ref’ attribute should be “stylesheet”.

Communications CRM from Salesforce.
With communications CRM from Salesforce Industries you can meet the high expectations of your customers. Because in this era, the era of the customer, the expectation of better, faster and more personalised customer service has never been higher. And if those needs are unmet, the opportunities for your customers to voice their displeasure are everywhere, and their audience is massive. But communications CRM from Salesforce Industries will ensure that your company is delivering your customers, sales reps, service agents and retailers the information needed to create a positive, personalised, loyalty-building customer experience.

Conclusion

In conclusion, building a Salesforce clone website using HTML and CSS is a valuable learning experience that can enhance your web development skills, creativity, and problem-solving abilities. It's an opportunity to explore the world of UI design and create a customized web application that meets your specific needs or showcases your skills to potential employers.
